

Summary of Findings: Sales & Customer Behavior Analysis for Alt Mobility

◆ 1. Order and Sales Analysis

- **Order Status Distribution:** The majority of orders were successfully completed, with smaller proportions in "Cancelled" or "Pending" states, indicating generally smooth fulfillment.
 - **Revenue Trends:** Sales show monthly fluctuations, with clear peaks in certain months — possibly linked to seasonal promotions or product launches.
 - **Insight:** Sales performance can be enhanced by analyzing peak months and replicating successful strategies during low-performance periods.
-

◆ 2. Customer Analysis

- **Repeat Customer Rate:** A significant portion of customers placed more than one order, indicating good customer satisfaction and product-market fit.
 - **Monthly Active Customers:** There is a consistent inflow of new and returning customers. However, some months show dips in activity, suggesting possible engagement or marketing gaps.
 - **Insight:** Encouraging repeat orders through targeted campaigns could further strengthen customer loyalty.
-

◆ 3. Payment Status Analysis

- **Success vs Failure:** Most payments were successful. However, there were identifiable instances of **failed payments** which may be due to payment method issues or platform errors.
 - **Insight:** Investigate failed payment causes and offer additional or more reliable payment options to minimize friction in the transaction process.
-

◆ 4. Order Details Reporting

- A comprehensive joined report of order and payment data allows tracking:
 - Which orders are pending or unpaid
 - Payment methods used most often
 - Correlation between payment success and order completion
 - **Insight:** This can be used by customer support and finance teams for reconciliation and tracking fulfillment pipelines.
-

◆ 5. Customer Retention (Cohort Analysis)

- **Cohort Retention Patterns:**

- Most customers order once in their cohort month and fewer return in subsequent months.
 - Some cohorts (e.g., from Q1 2020) retained customers over multiple months, suggesting effective campaigns or product satisfaction.
 - **Insight:**
 - Retention decays over time — expected in consumer behavior.
 - Improvements in onboarding experience, loyalty programs, or re-engagement emails could enhance long-term retention.
-

□ Data Observations

- **No major anomalies** were found, but payment failures should be reviewed further.
 - Dates were standardized for analysis, and no null-critical fields were encountered during this phase.
 - Recommendations for future data collection: add user demographics or channel sources for deeper segmentation.
-

Recommendations for Alt Mobility

1. Focus on **repeat customer engagement** using loyalty incentives.
2. Analyze and **fix root causes of payment failures** to prevent cart drop-offs.
3. Replicate successful campaigns seen in **high-performing cohorts**.
4. Track and boost performance during **low-activity months** with promotions.
5. Integrate customer feedback loops to further **improve retention and satisfaction**.
